

Practical Ventilation and Warming

Filesize: 3.67 MB

Reviews

These types of pdf is the greatest pdf readily available. I actually have study and that i am certain that i am going to going to go through again again later on. You wont sense monotony at at any moment of your own time (that's what catalogs are for relating to when you request me).

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1881 Excerpt: .of coke burnt to heating surface, in feet, 1 to 6. Grate space to capacity of fire-box, in inches, 1 to 178. Heating surface to cube contents, in inches, 1 to 31. The total heating surface of each stove is 296 square feet, and the radiating surface 779 square feet. The work actually done by each stove in warming air is as follows: No. 1 stove--1,192 cubic feet of air thrown into room at 312 Fahr., outer air being at 520, difference 2600. By multiplying the cubic feet of air by its weight in pounds per cubic foot at 312 and by its specific heat per pound, which is constant at all temperatures, and by the number of degrees Fahr. that the temperature of the air is raised--the heat units per minute are given as under, and these, multiplied by 60, give the units per hour. G 82 Arlington Baths, Glasgow. No. 1 Stove. 1,192 cubic feet raised to 312, 3,465-28 units x 60--207,916.8 units. No. 2 Stove. 788 7 cubic feet raised to 2600, 2.14739 units x 60 = 128,843-4 A total of 336,760-2 To produce this result the consumption of gas coke is 60 cwts. in cold, and 48 cwts. in warm weather. The temperature being at 520 during these observations, the latter amount has been taken, giving 97-7 lbs. of coke consumed per hour, or 48, 8 lbs. per stove. The heating power of coke, when fully burnt with sufficient air, is 10,970...
